Abstract (Basic): DE 3727667 A

The label strip is taken from a reel (1) and fed through a number of printing heads (3) operated by a programmed control (15). The items to be labelled (5) are moved along a conveyor and their types and positions monitored by sensors (16) linked to the control.

The labels are applied to each item via a dispensing tongue (6) which strips the labels off the support strip and presses them onto the items. The programmed printing sequence is linked to the supply of items. Different label information can be applied to each item.

USE/ADVANTAGE - Label printer and applicator. No need to stop machine to change label information, programmable labelling.

2/2

Abstract (Equivalent): DE 3727667 C

The label strip is taken from a reel (1) and fed through a number of printing heads (3) operated by a programmed control (15). The items to be labelled (5) are moved along a conveyor and their types and positions monitored by sensors (16) linked to the control.

The labels are applied to each item via a dispensing tongue (6) which strips the labels off the support strip and presses them onto the items. The programmed printing sequence is linked to the supply of items. Different label information can be applied to each item.

USE/ADVANTAGE - Label printer and applicator. No need to stop machine to change label information, programmable labelling.
